The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

Applicant is hereby notified that the required timing for the correction of drawings has changed. See the last 6 lines on the sheet which is attached entitled "Attachment for PTO-948 (Rev. 03/01 or earlier)". Due to the above notification Applicant is required to submit drawing corrections within the time period set for responding to this Office action. Failure to respond to this requirement may result in abandonment of the instant application or a notice of a failure to fully respond to this Office action.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-62, 67-74, 78-82, 153-203, and 209-211; drawn to an optical disc with a substrate having a patterned surface with an information layer and methods of making same, classified in Class 422, subclass 68.1. If this Group is elected, then the below summarized specie election is also required.

II. Claims 63-66 and 204-208, drawn to a method of making an inverted optical disc, classified in Class 430, subclass 270.11. If this Group is elected, then the below summarized specie election is also required.

III. Claims 75-77, drawn to methods of segregating tracking

signals, classified in Class 702, subclass 66. If this Group is elected, then the below summarized specie election is also required.

IV. Claims 83-129, drawn to an optical disc player adapted for operating with a spiral or concentric shaped tracks with focus error signal generation with error tracking, classified in Class 369, subclass 44.11.

V. Claims 130-152, drawn to an information storage and sample analysis medium, classified in Class 710, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Each of the above Group descriptions includes a distinct limitation that distinguishes the Group from all other Groups, thus making the subject matter different and non-overlapping between Groups I - V. This documents the undue search burden that is present if any two of these Groups would be searched together thus supporting this restriction requirement.

SPECIE ELECTION REQUIREMENT FOR GROUPS I - III:

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie A: Optical disc limitations have structure without an analyte-specific signal element required therein

Specie B: Optical disc has a structure which is an analyte-specific signal element

The above two species are distinct because optical discs without an analyte specific element may be utilized in well known data storage and retrieval methods without analyte detection etc. The practice of analyte detection and data/information development requires assay methodology which is not overlapping with mere data/information storage and retrieval thus documenting the distinctness of the above species.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently; claims 1-12, 19-24, 26-62, 67-74, 78-82, and 156-161 in Group I; claims 63-66 and 204-206 in Group II; and claims 75-77 in Group III are generic in their respective groups.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the

inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CFR § 1.6(d)).
